CONNECTION

Cautions

1. Do not wire the telephone cable in parallel with the AC power source, computer, telex, etc. If the cables run near those wires, shield the cables with metal tube or use shield cables and ground the shields.
2. When cables run on the floor, use protectors or the like to protect the wires where they may be stepped on. Avoid wiring under carpets.
3. Avoid using the same AC 120 V power supply outlet for computers, telexes, and other office equipment. Otherwise, KX-T30810 system operation may be interrupted by the induction noise from such equipments.
4. Please use one pair telephone wire for extension connection of (telephone) equipments such as standard telephone, data terminal, answering machine, computer, etc., except proprietary telephone KX-T30830, KX-T30820, KX-T30850 etc.).

ADJUSTMENTS

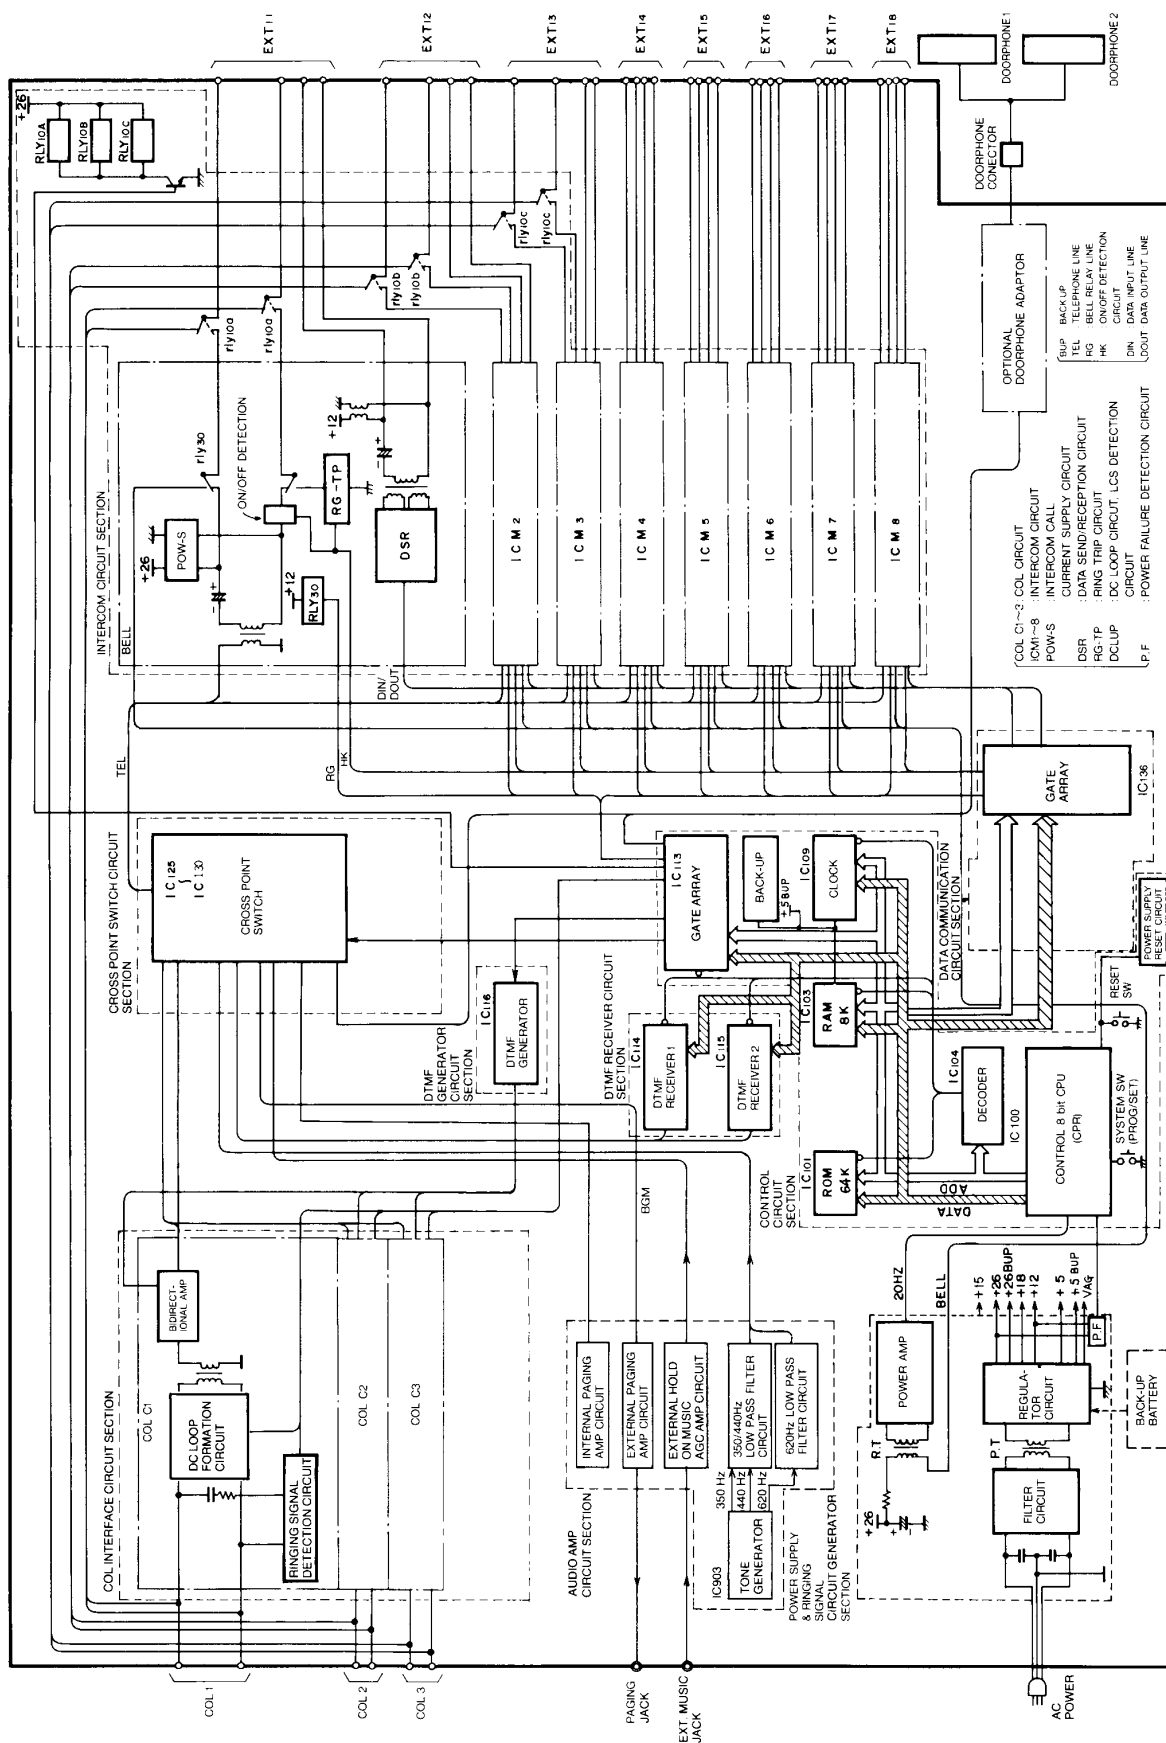

■ OSCILLATION PERIOD ADJUSTMENT

Perform the following adjustment after replacing IC109.

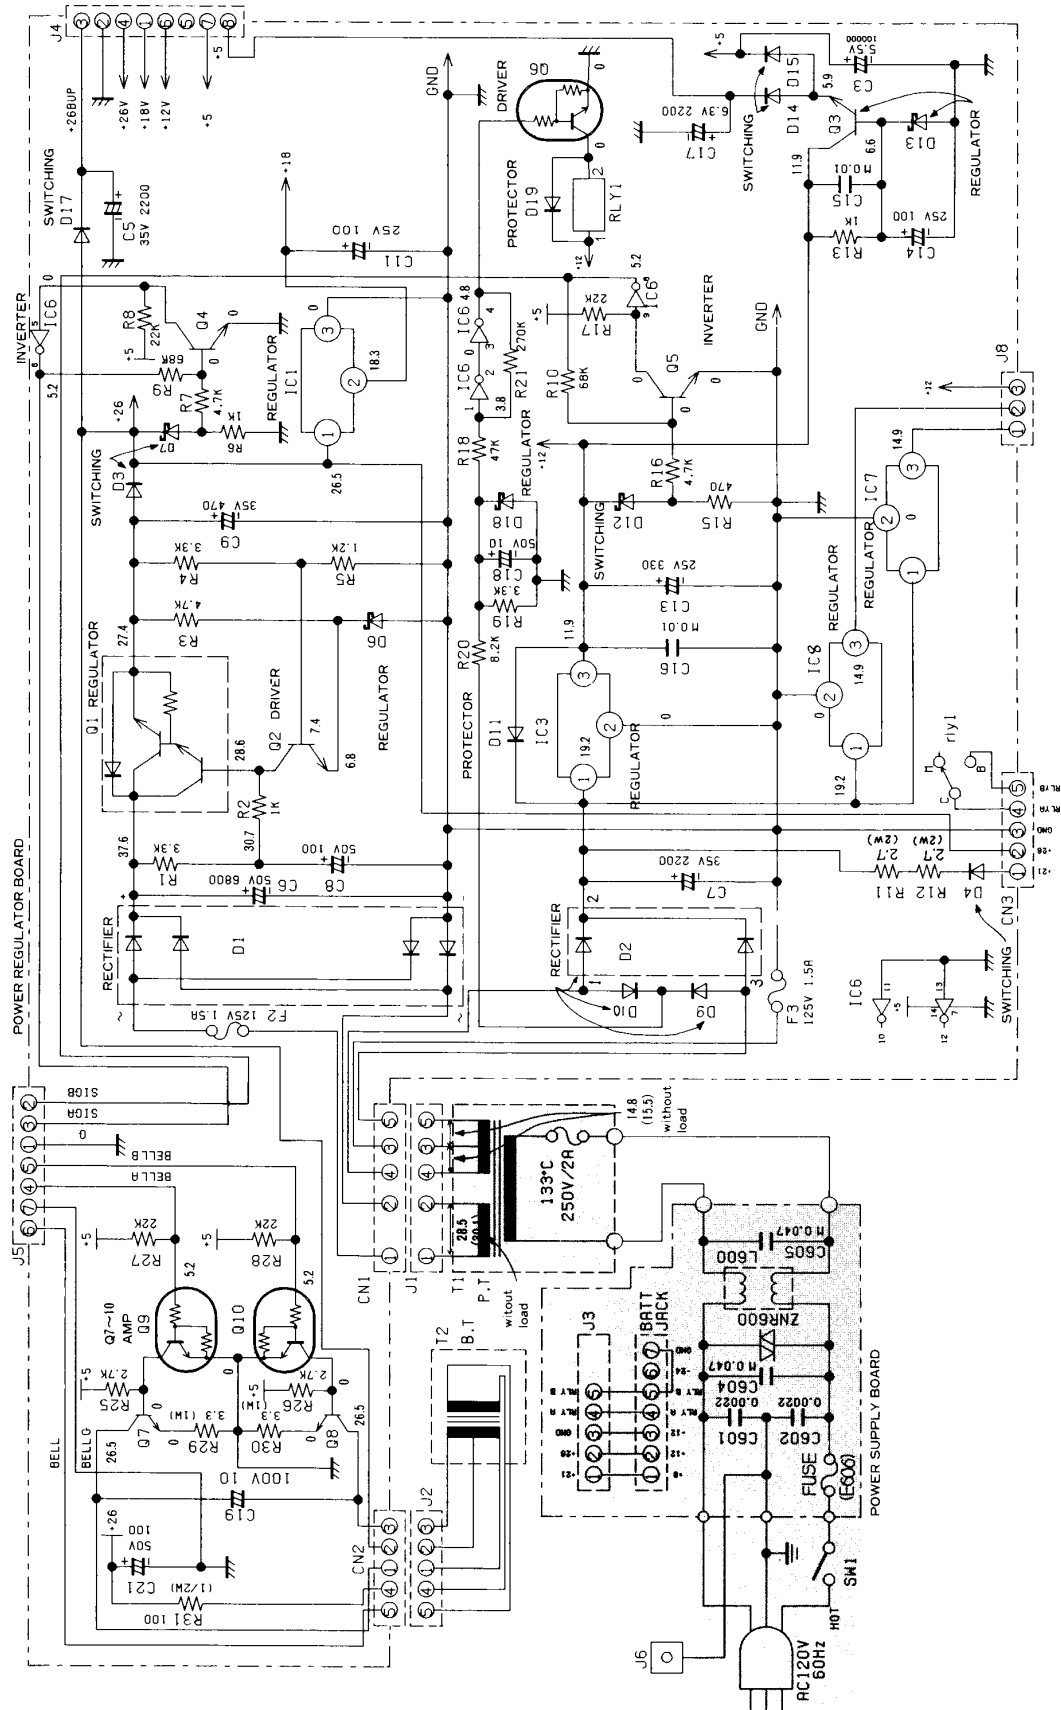

1. Connect the AC cord to the AC power source.
2. Set the power switch to ON.
3. Connect the lead wire. (See Fig. 12)
(After adjustment, remove the lead wire.)
4. Push the reset switch.
5. Connect the frequency counter. (See Fig. 11)
6. Set the frequency counter to PERIOD.
7. Adjust VC100 for a reading of () msec on the frequency counter.
